

Product Information

On Site Electronics **ESA1**

- Compact local display and switching module for RRI / H Flow Sensors
- Switching point displayed optionally
- Switching point can be set without process condition
- Display of the switching value via red LED signal lamp

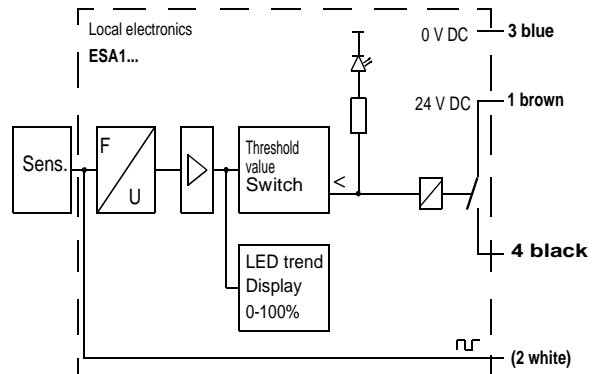

Characteristics

The electronics consist of a primary sensor, which is able to detect the rotor blade of the flow meter (inductive or Hall sensor depending on the material of the transmitter) and a calibratable F / U convertor, which presents the detected frequency on a trend display, and which allows the comparator and therefore the "min switching value" to be set via an adjustable potentiometer. Switch opens when there is a fault (< switching point)

Technical data

Sensor	see "Ordering code"
Working ranges	
Measurement accuracy	see relevant flow meter
Operating pressure	
Operating temperature for the electronics	max. 60 °C
Materials	PA6.6
Supply voltage	24 V DC ±10 %
Power consumption	1,5 W
Limit values	normally open (n.o.) (24 V DC, 24 W)
Hysteresis	set to 2 % at the factory
Display	12 LEDs (green)= current value and option to display switching value. LED (red) =< min
Electrical connection	for round plug connector M12x1, 4-pole, cable outlet optionally available
Ingress protection	IP 60

Terminal assignment

Before the electrical installation, it must be checked that the supply voltage corresponds with the data sheet. The "min." relay contact is to be used exclusively for signal voltages. If a higher powered relay is to be actuated, then connect a free-wheeling diode above the power relay, in order to reduce induction spikes.

The changeover contact is depicted in the rest state (no supply voltage). The "in range" status accordingly corresponds to the tensed state. If the power to the sensor is lost, the relay then also returns to the rest state.

Dimensions

ESA1-RR.-010

ESA1-RR.-025

Product Information

Handling and operation

Installation

It should be ensured that the flow meter and the ESA1 electronics are matched to each other (same production number). The ESA1 electronics must be full inserted into the Rototron flow meter in order to detect the signal securely. For RR.25... there is the option of turning the converter by 90 ° in order to create the most suitable reading position. For RR.10... the position should be stated when ordering.
 The stainless steel clamps prevent the electronics from coming away from the base unit, even if there is vibration.

Adjustment

Together with the corresponding flow meters, the ESA1 electronics create an adjustable flow meter with trend display (1). When the switching point is fallen short of, the output goes from 24 V DC to 0 V (open status). The switching point can be displayed at any time by pressing the "Press" button (3) and can be adjusted by simultaneously turning the potentiometer (4). A red LED (2) indicates when the switching point has been fallen short of. If the touch key is not actuated, the present value is displayed.

- 1. Trend display (12 x LED green)
- 2. <min. display (LED red)
- 3. Touch key (displays switching point)
- 4. Potentiometer for setting the min.-signal (simultaneously 3)

Ordering code

The base device is ordered, e.g. RRI-xxx with the signal output E and the evaluation electronics described here e.g. ESA1-RRI-xxx.

ESA1- 1. 2. 3. 4.
 -

○=Option

1. For types	
RR	for flow meter RR
2. Sensor	
I	inductive (for flow meter RRI)
H	hall (for flow meter RRH)
3. Nominal width	
010	for flow meter size DN 10
025	for flow meter size DN 25
4. Electrical connection	
S	for round plug connector M12x1, 4-pole
K	<input type="radio"/> cable outlet 2 metres

Options

- Ingress protection IP 65

Accessories

- Cable/round plug connector (KB...) see additional information "Accessories"
- Fixing clamps RR.-010
- Fixing clamps RR.-025
