Temperature Probe with Transmitter GTMU

- Optimal adaptability due to 4 different design types
- PT100 or NiCr-Ni probe incl. transmitter
- Ready for assembly

Characteristics

The GTMU is a temperature probe with integrated transmitter. There are 4 basic design types and 2 sensor types. This ensures optimal adaptability to different conditions like higher temperatures, outdoor usage or wall mounting.

The measurement is done by means of a resistive temperature sensor (Pt100, 2- or 3- wire) or thermocouple (NiCr-Ni). The transmitter outputs linear current or voltage signals.

The transmitter is completely customized according to customer requirements.
